

Talk Show on Education, Employability & Entrepreneurship

On the following evening of 08th May, 2016 Career Point University of Kota and Hamirpur jointly organized a talk show on Education, Employability and Entrepreneurship. The guest of the talk show were Mr. Manish Sisodiya Deputy CM & Education Minister of Delhi, Mr. Om Maheshwari and Mr. Pramod Maheshwari the Co-Founder and Founder of Career Point Group and Mr. Mithlesh Dixit Vice- Chancellor of Career Point University, Kota.

The three terms Employability, Education and Entrepreneurship are interrelated to each other. With the emerging era of entrepreneurs, the need is the sustainability of business with creative ideas.

The talk show started with the gratified welcome of guest. Mr. Pramod Maheshwari started the session with his opinion on "Education, Employability and Entrepreneurship". He said, "Employment ensures that individual should lead healthy, productive life and should have access to the resources needed for decent standard of living. India is facing the major challenge regarding the job creation as it is the initial step since it is directly proportional to the employability. Improving and ensuring quality of education contributes to overall economic growth.". He further added "entrepreneurs are the source of employability."

Chief Guest Mr. Sisodia put forward this idea and said, "We have been constantly dealing with problems in these three field." He quoted the thought of Dalai Lama "*now the time has come to realize that the solutions of our problems are not in the prayers but in the education system*". He further added, "25 years ago we wouldn't have imagined today's technology. Biggest examples of successful people and ideas are facebook, flipkart etc.

We are one of the country in which institutions are introduced on the basis of marks and package of passed out students. We have to improve our education system and it is expected from the parents that they should give a thought on what kind of person his/her child will become after 20 years of education. One more reason for why we're lagging behind is that we are stuck in our past achievements but don't have any vision for the future research and development. Other countries are leading because they are continuously putting efforts to get better.

Our education system needs the critical and scientific thinking. Innovation, confidence, social acceptability, social relationships too are major factors."
